📝 Project Brief

An e-commerce business provided a dataset of user events tracking customer interactions across their platform. The objective was to analyse the sales funnel, identify drop-off points, evaluate traffic source performance, and provide recommendations to improve conversion rates and revenue.

Questions to answer:

- Where are users dropping off in the purchase journey?
- Which traffic sources drive the most conversions?
- How long does it take users to convert?
- What does the revenue picture look like per visitor and per buyer?
